Ing. Gabriel Valky, PhD.

ATMEGA328P

ATMEGA328P

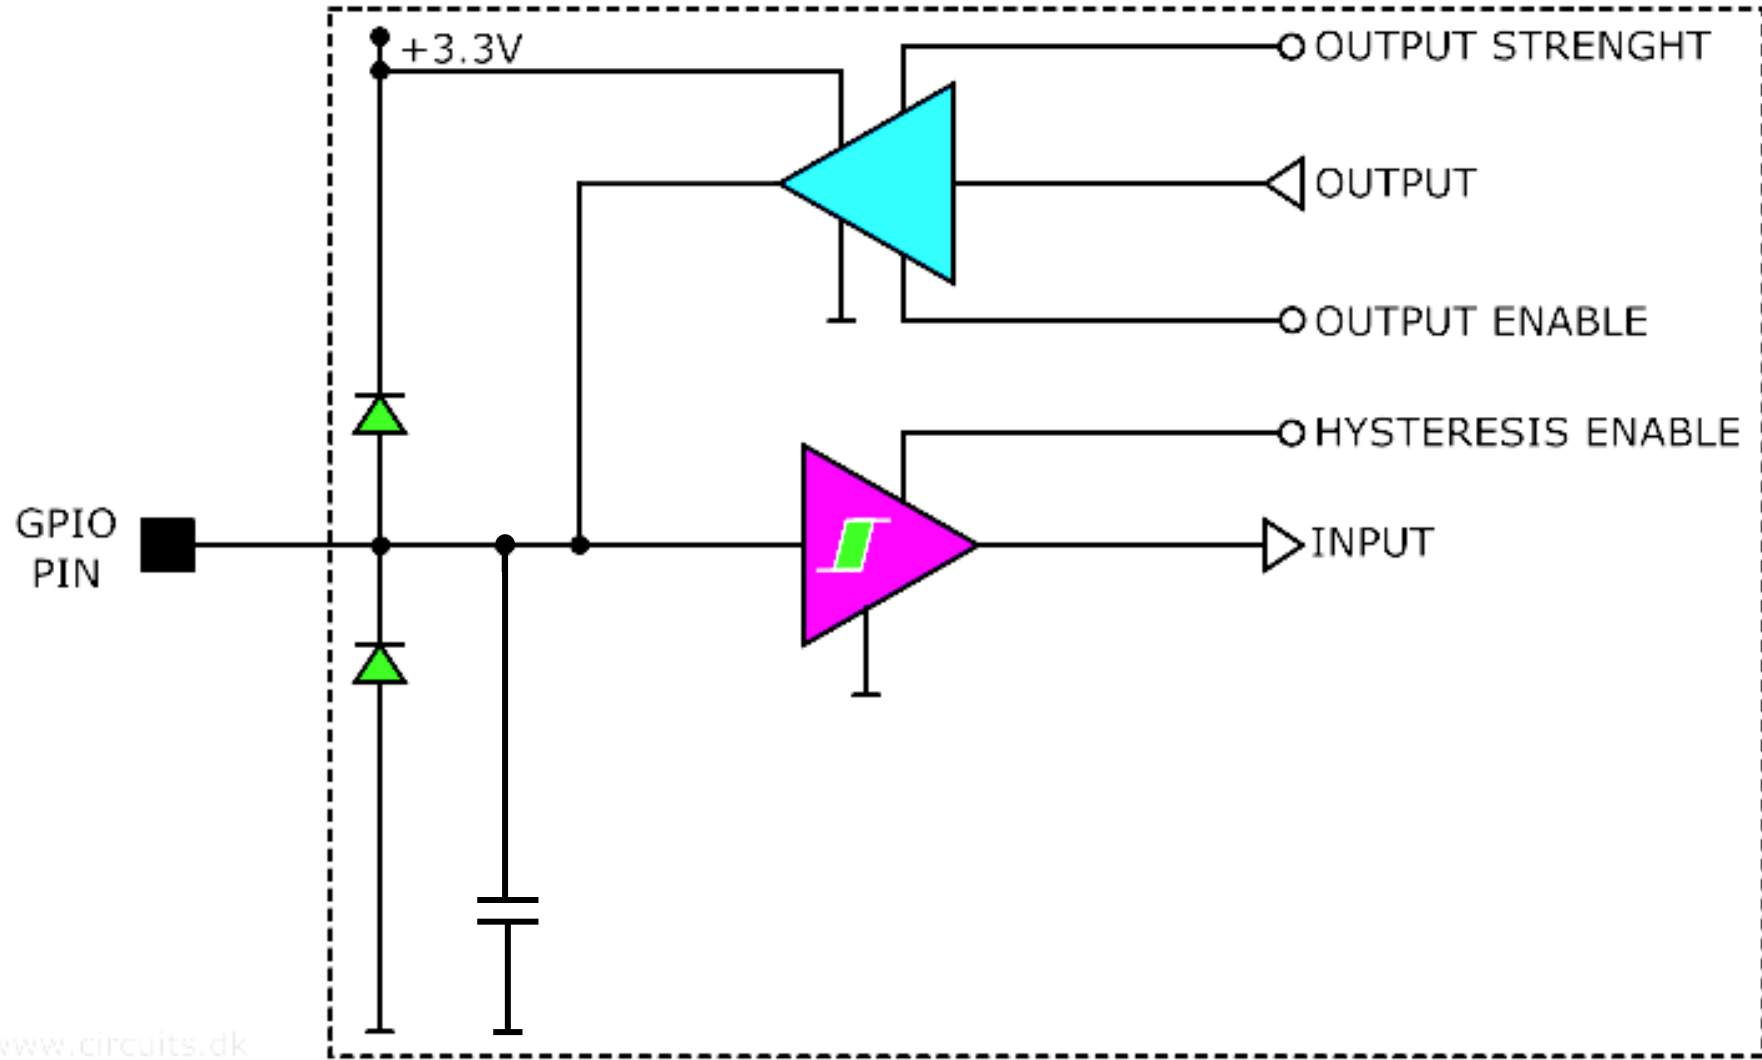

ATMEGA328P

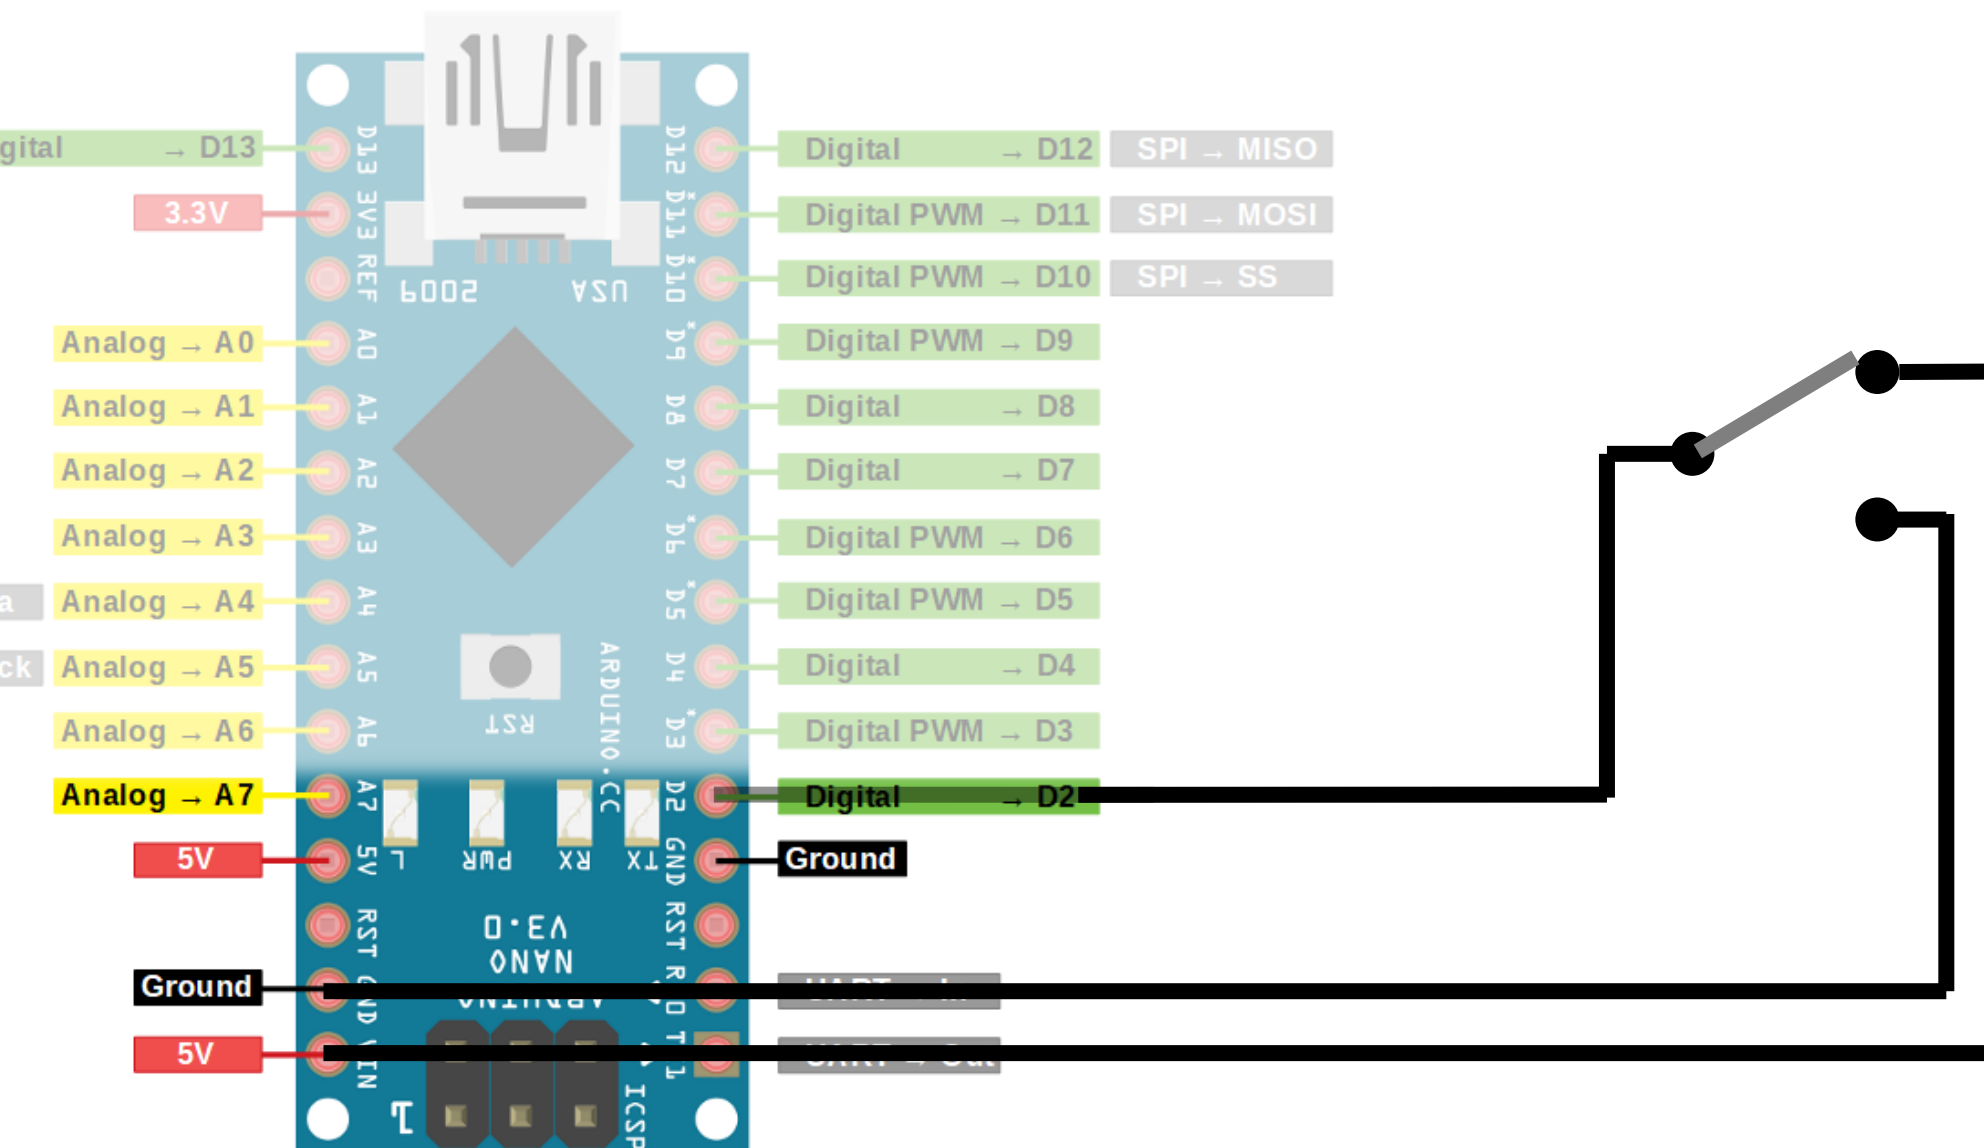

Experiment – vstupna impedanca

Letujeme

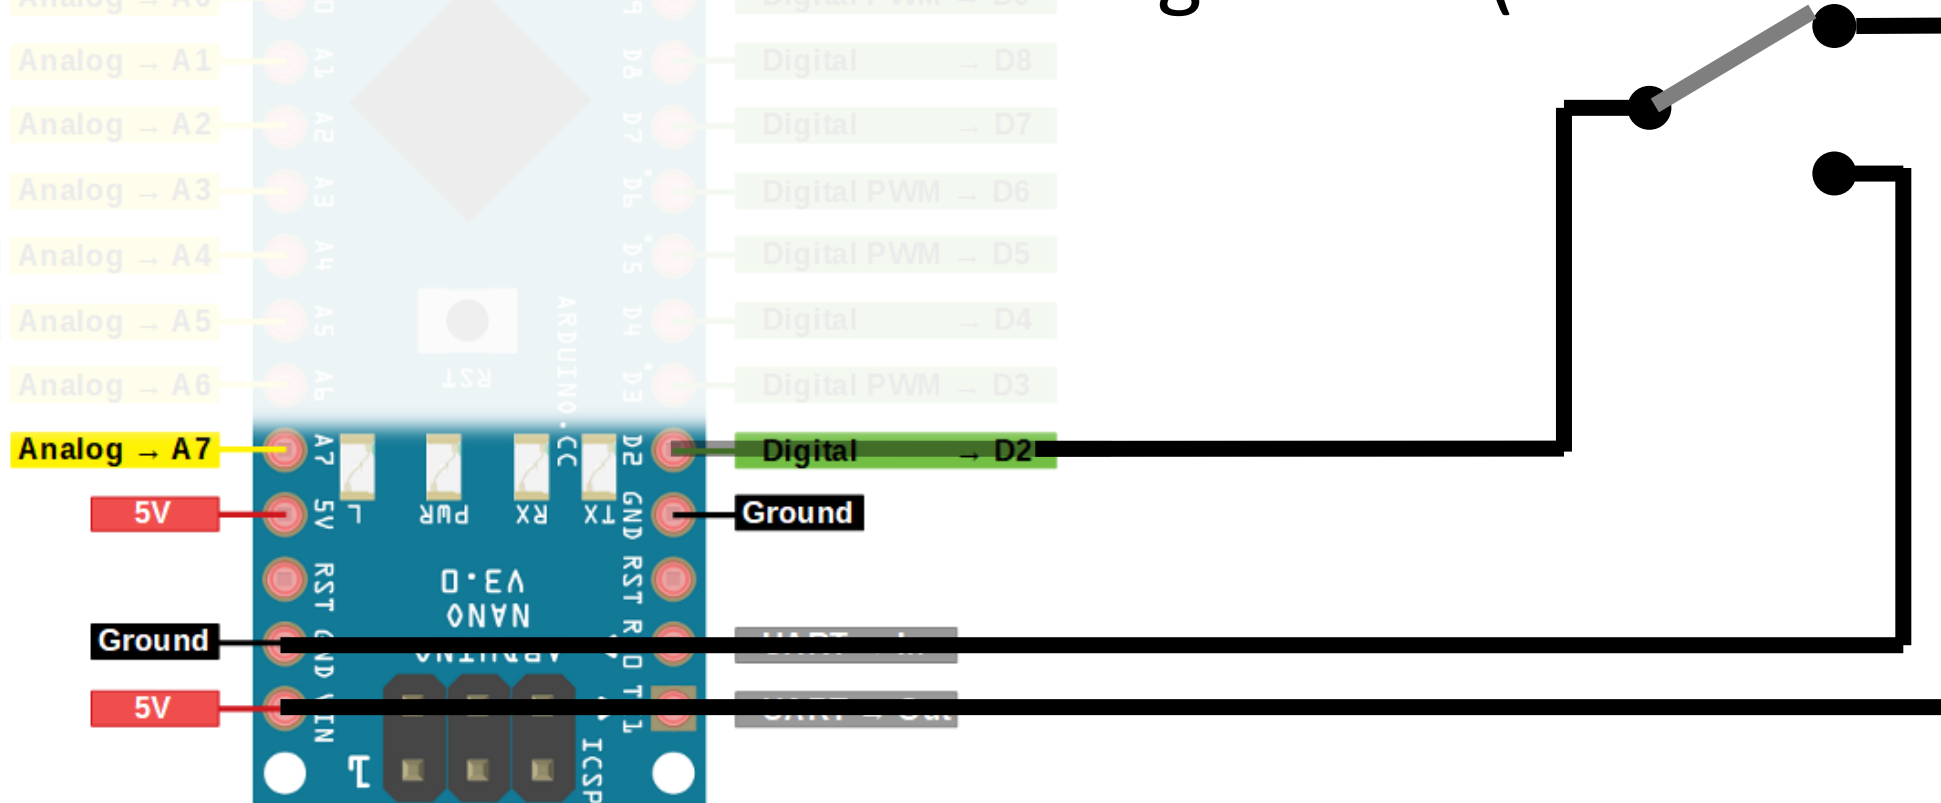

Source: Fritzing

Uloha 0:

File -> Examples -> 01. Basics -> Blink

Tools -> Board -> Arduino Nano

Tools -> Processor -> Atmega 328P (Old bootloader)

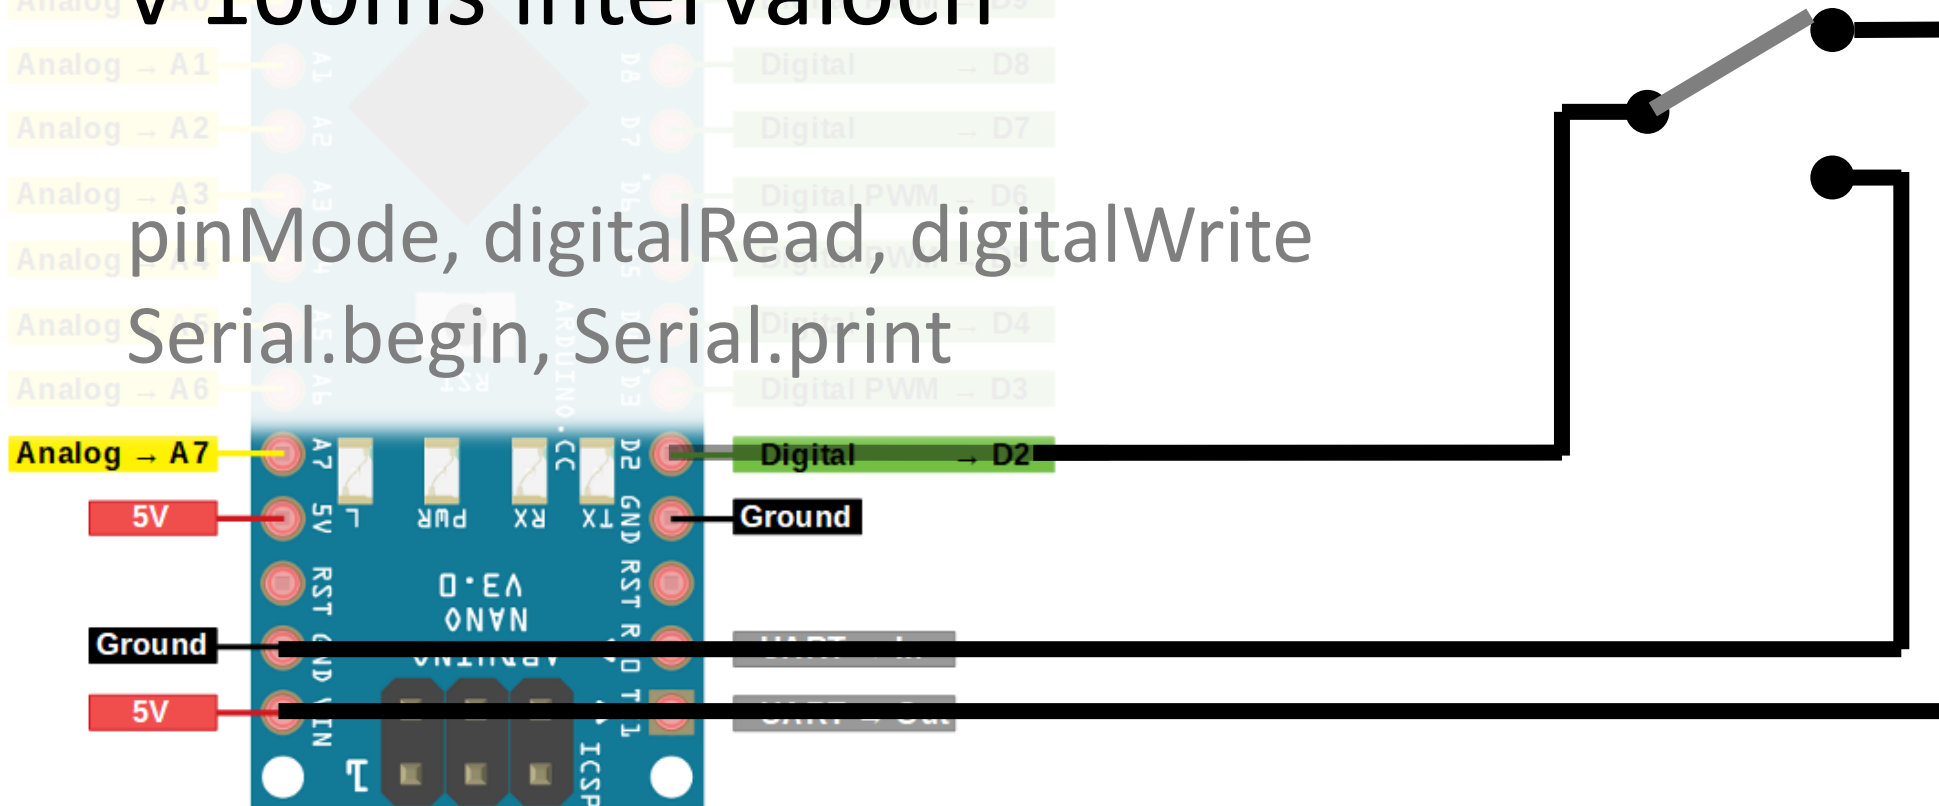

Source: Fritzing

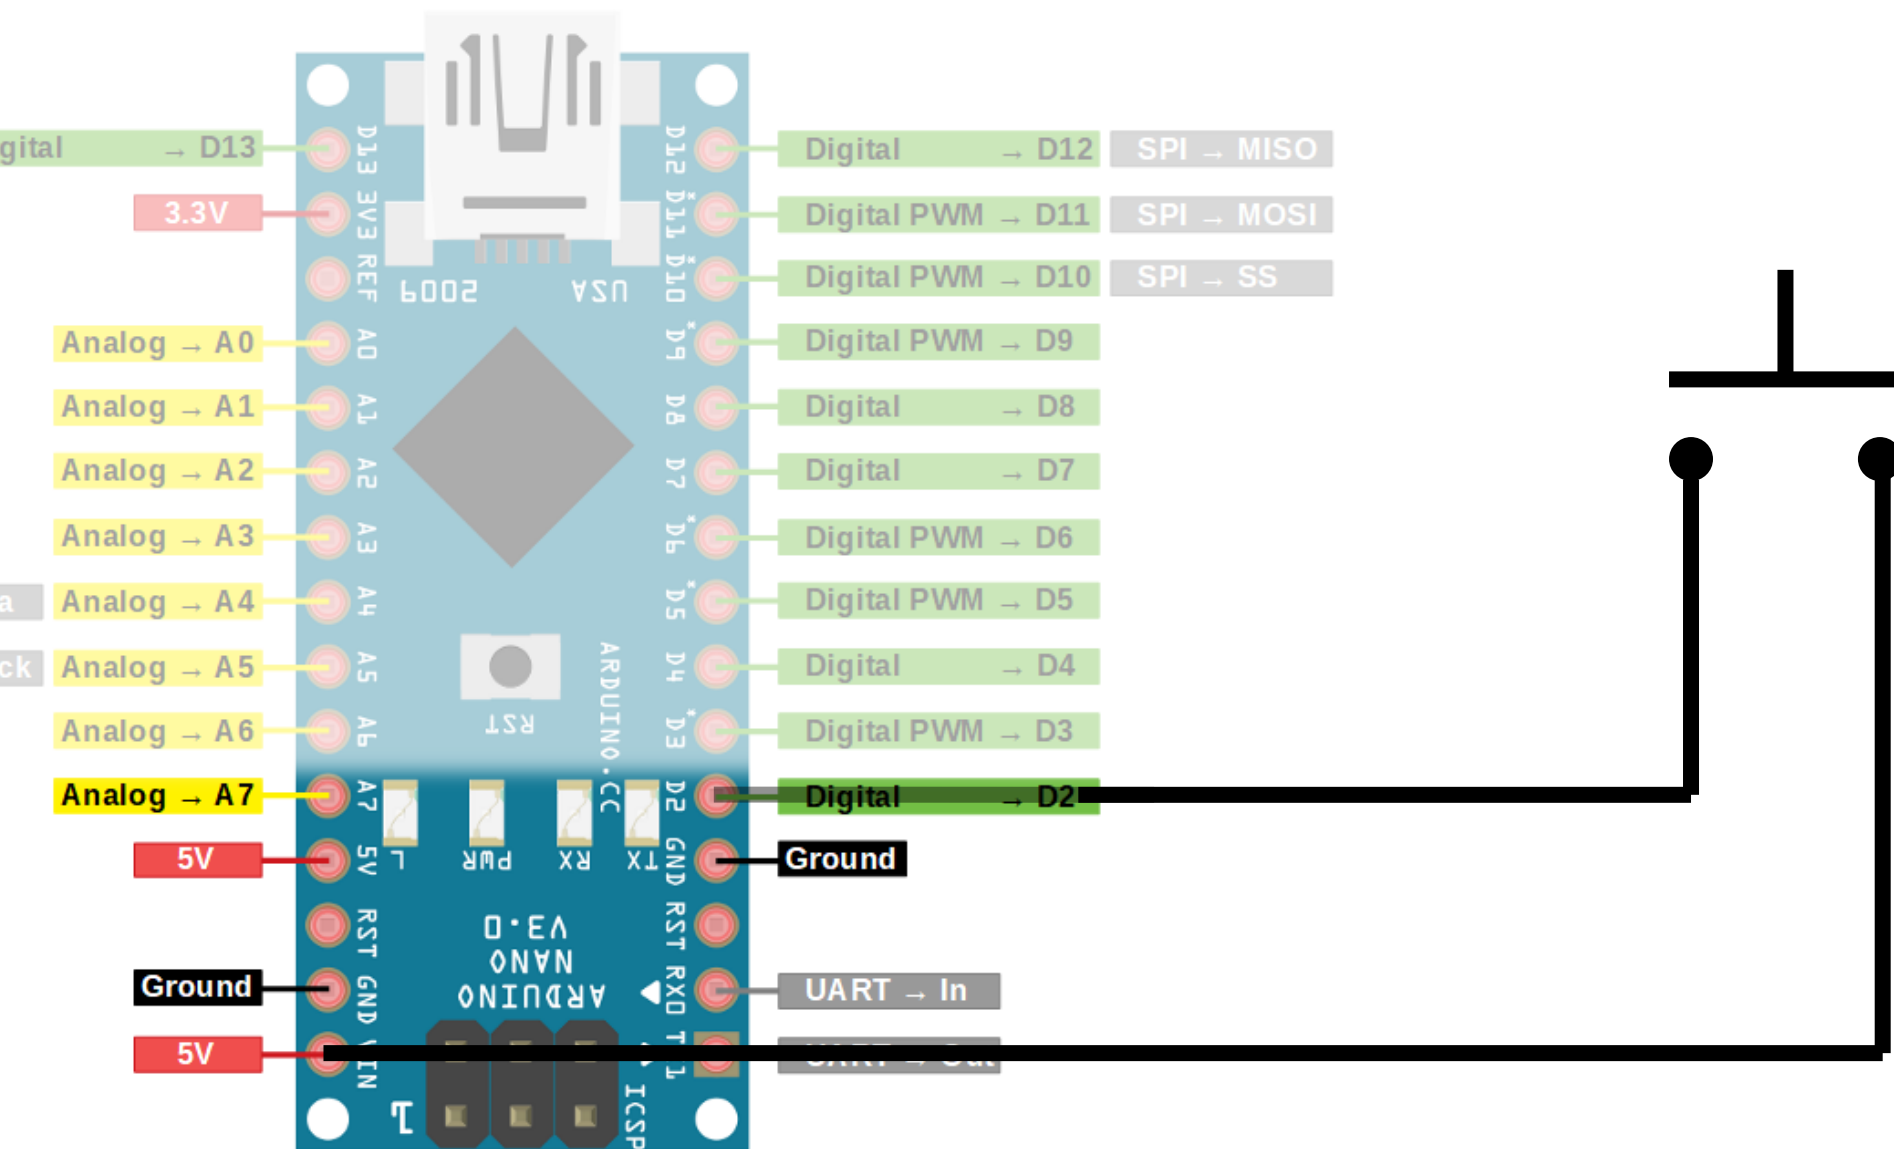

Uloha 1: Rozsviet internu LED podľa podla logického stavu na vstupnom pine D2

Uloha 2: Vypisuj hodnotu logického stavu pinu D2 v 100ms intervaloch

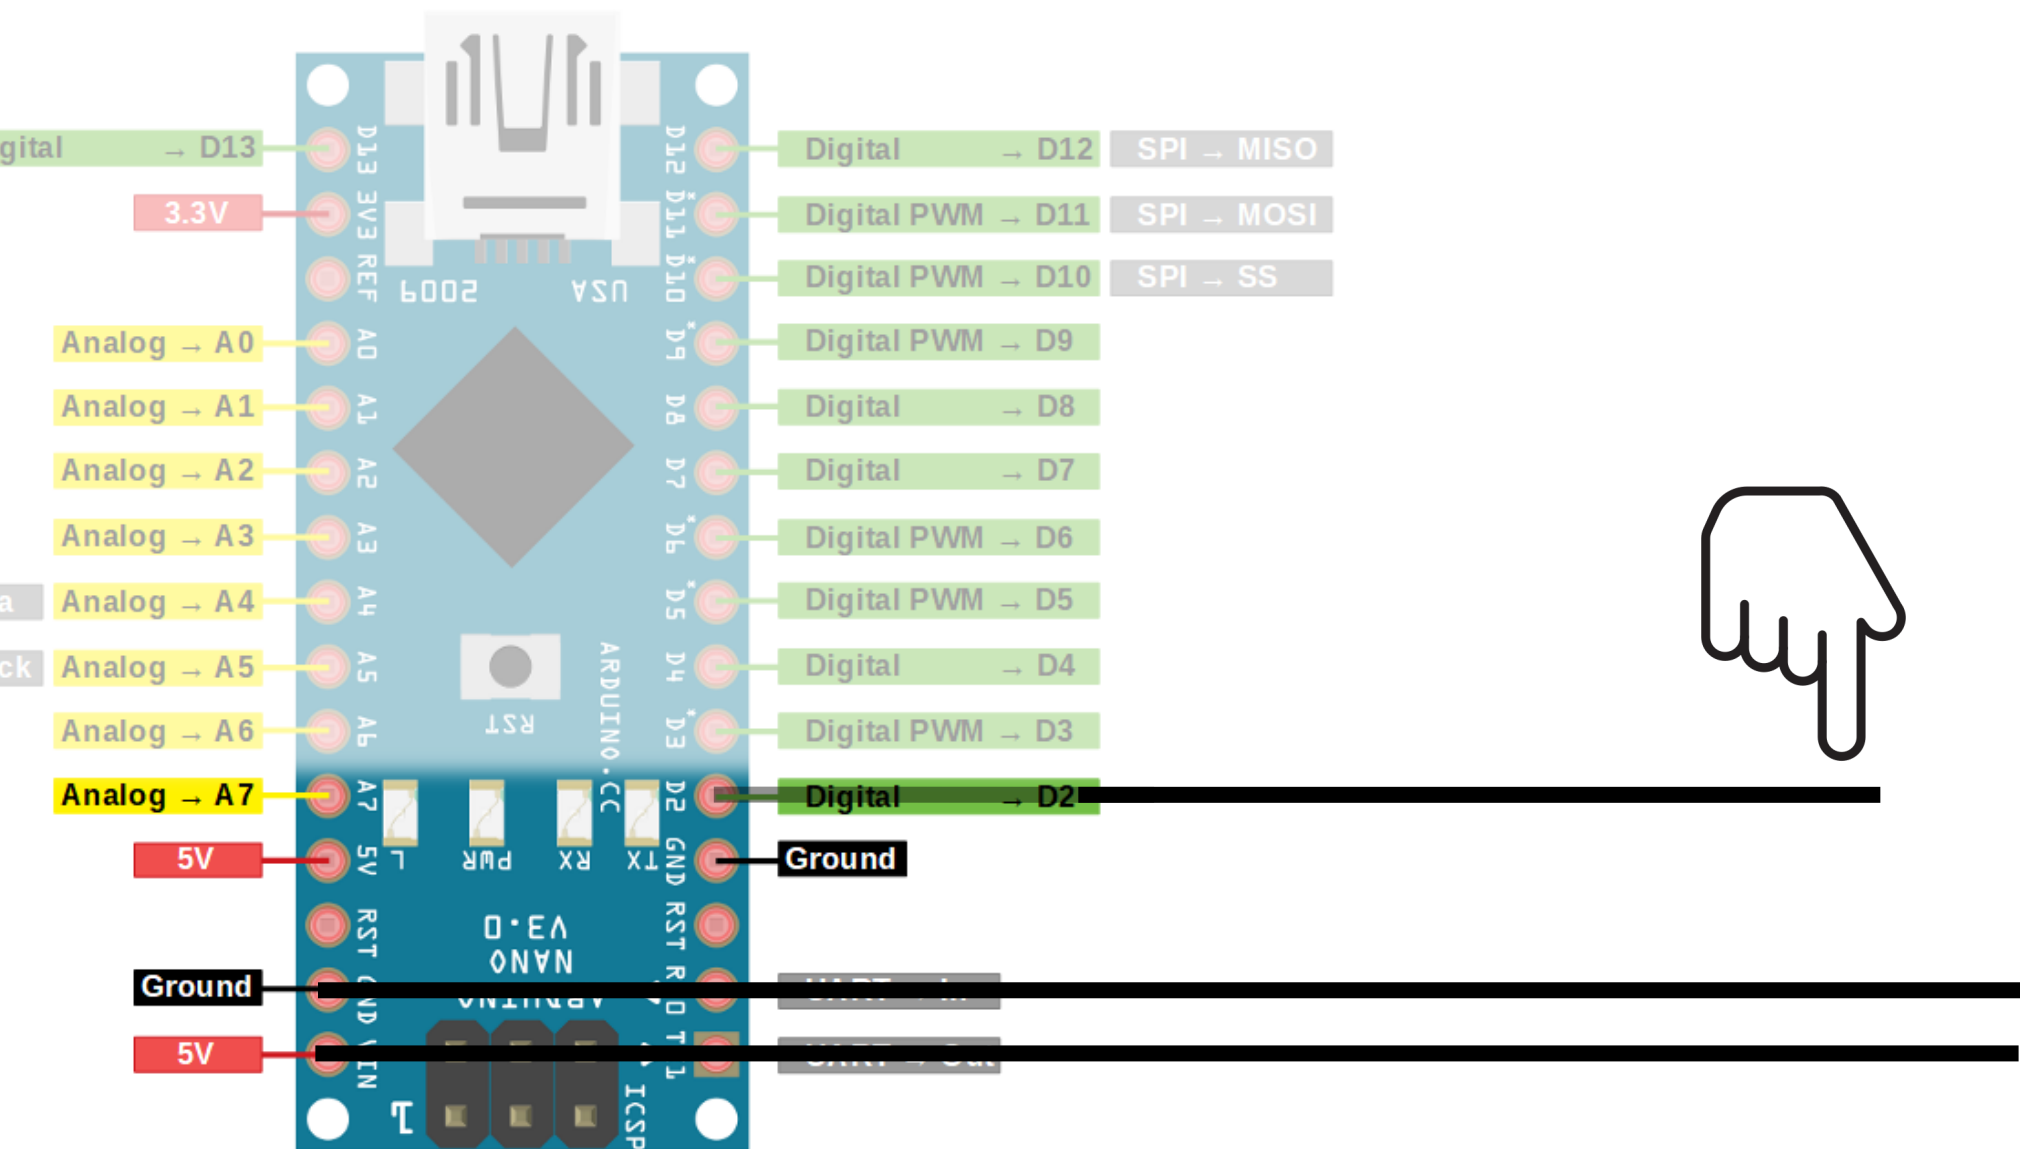

pinMode, digitalRead, digitalWrite
Serial.begin, Serial.print

Source: Fritzing

Source: Fritzing

Source: Fritzing

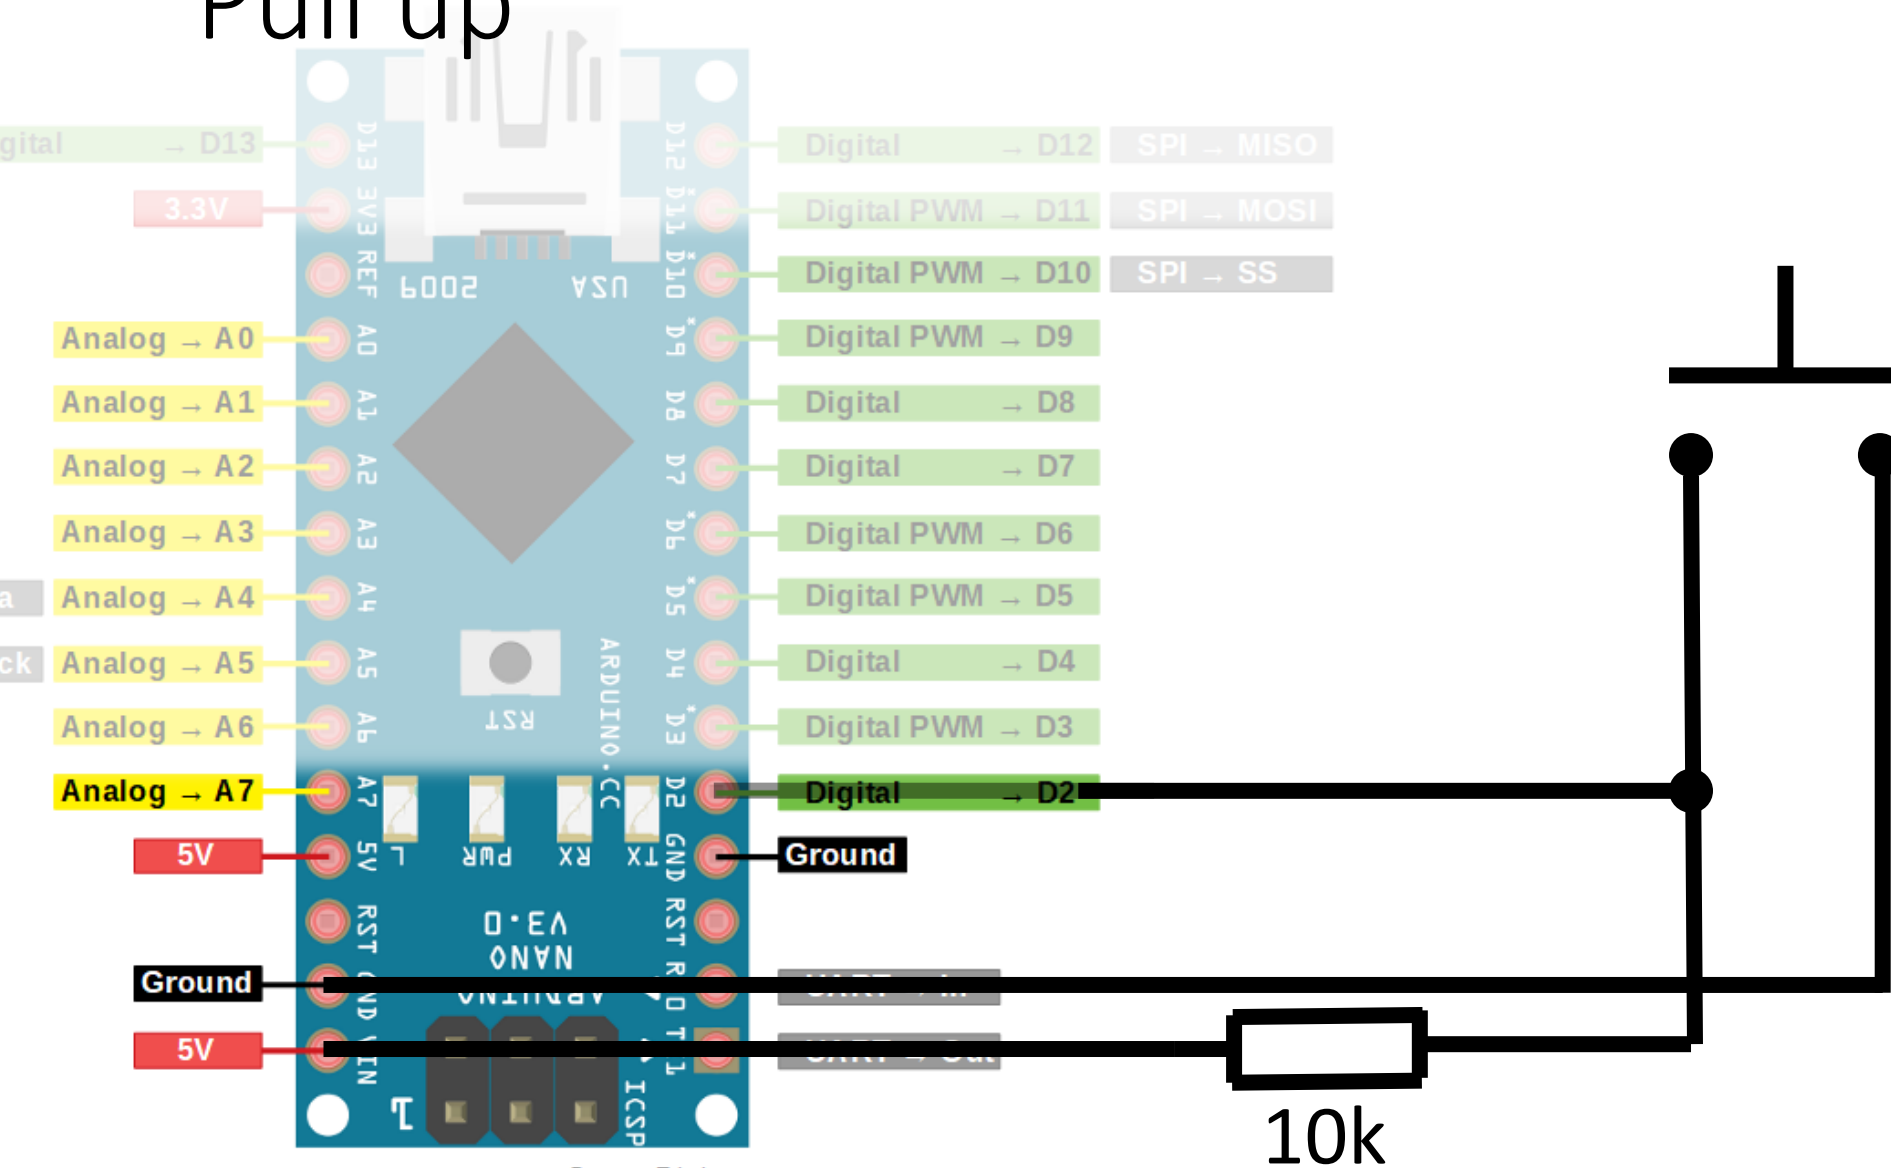

Experiment – sietova kapacitna vazba

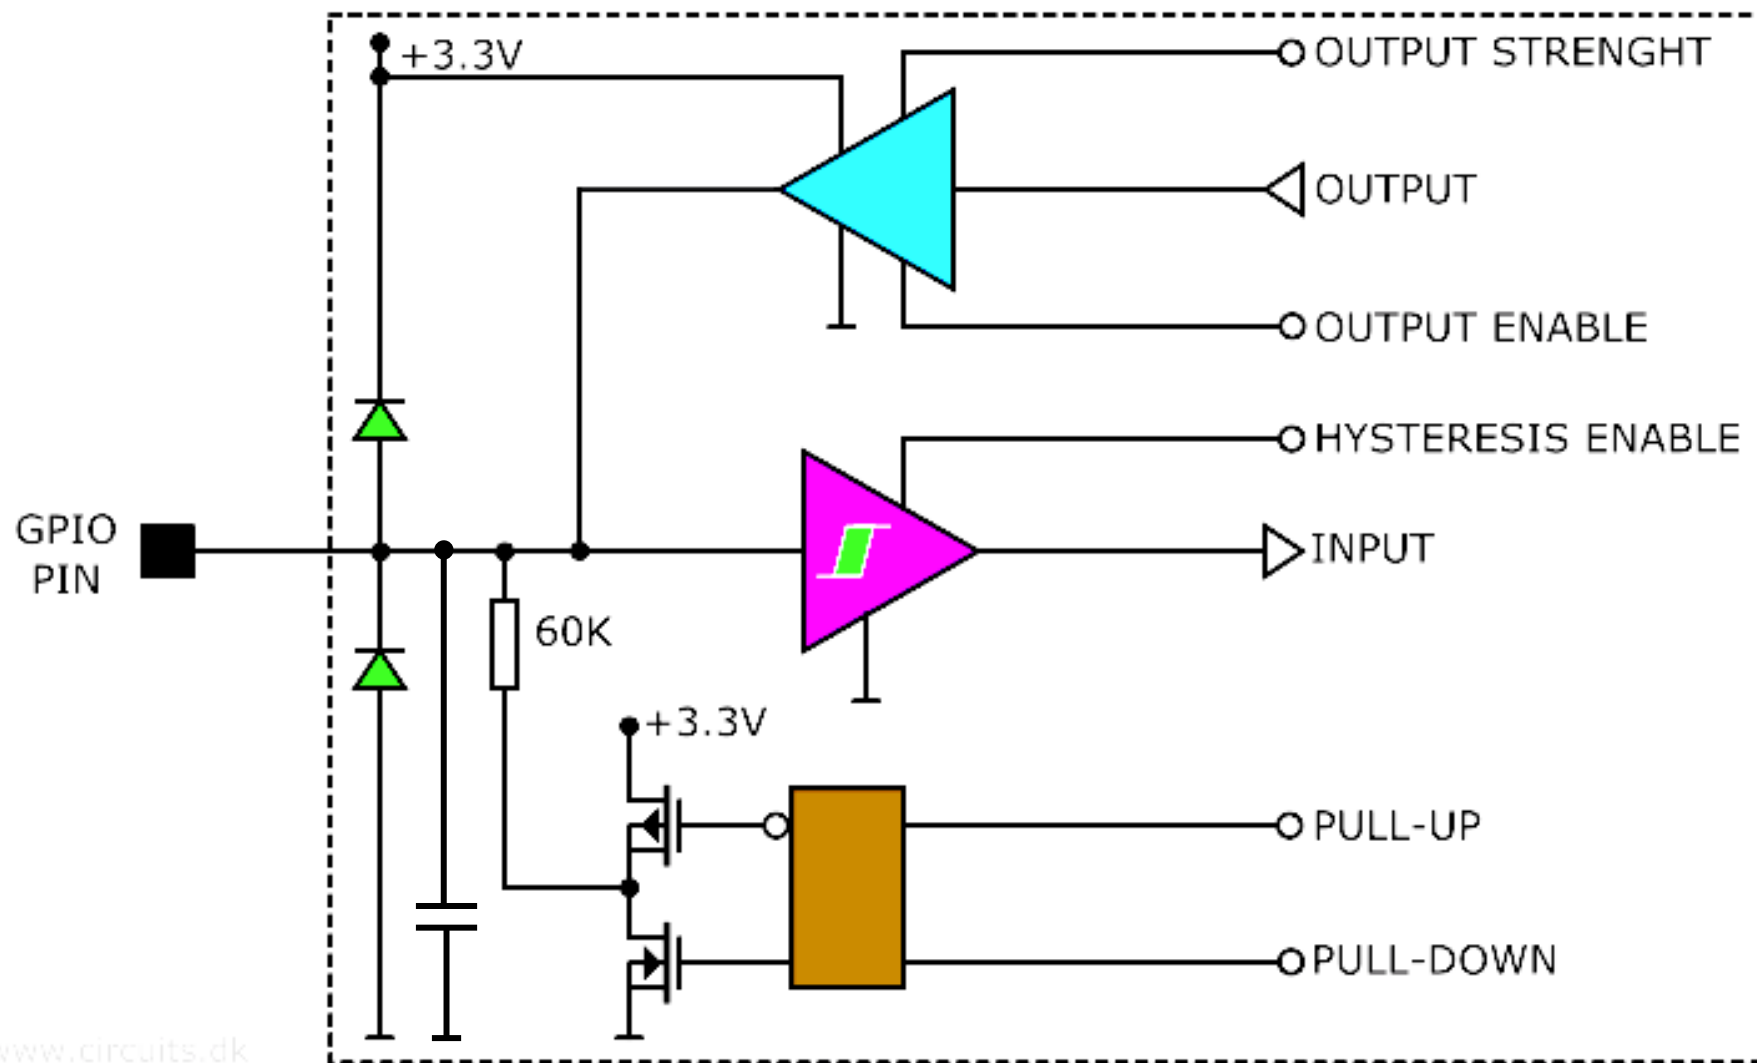

Pull down

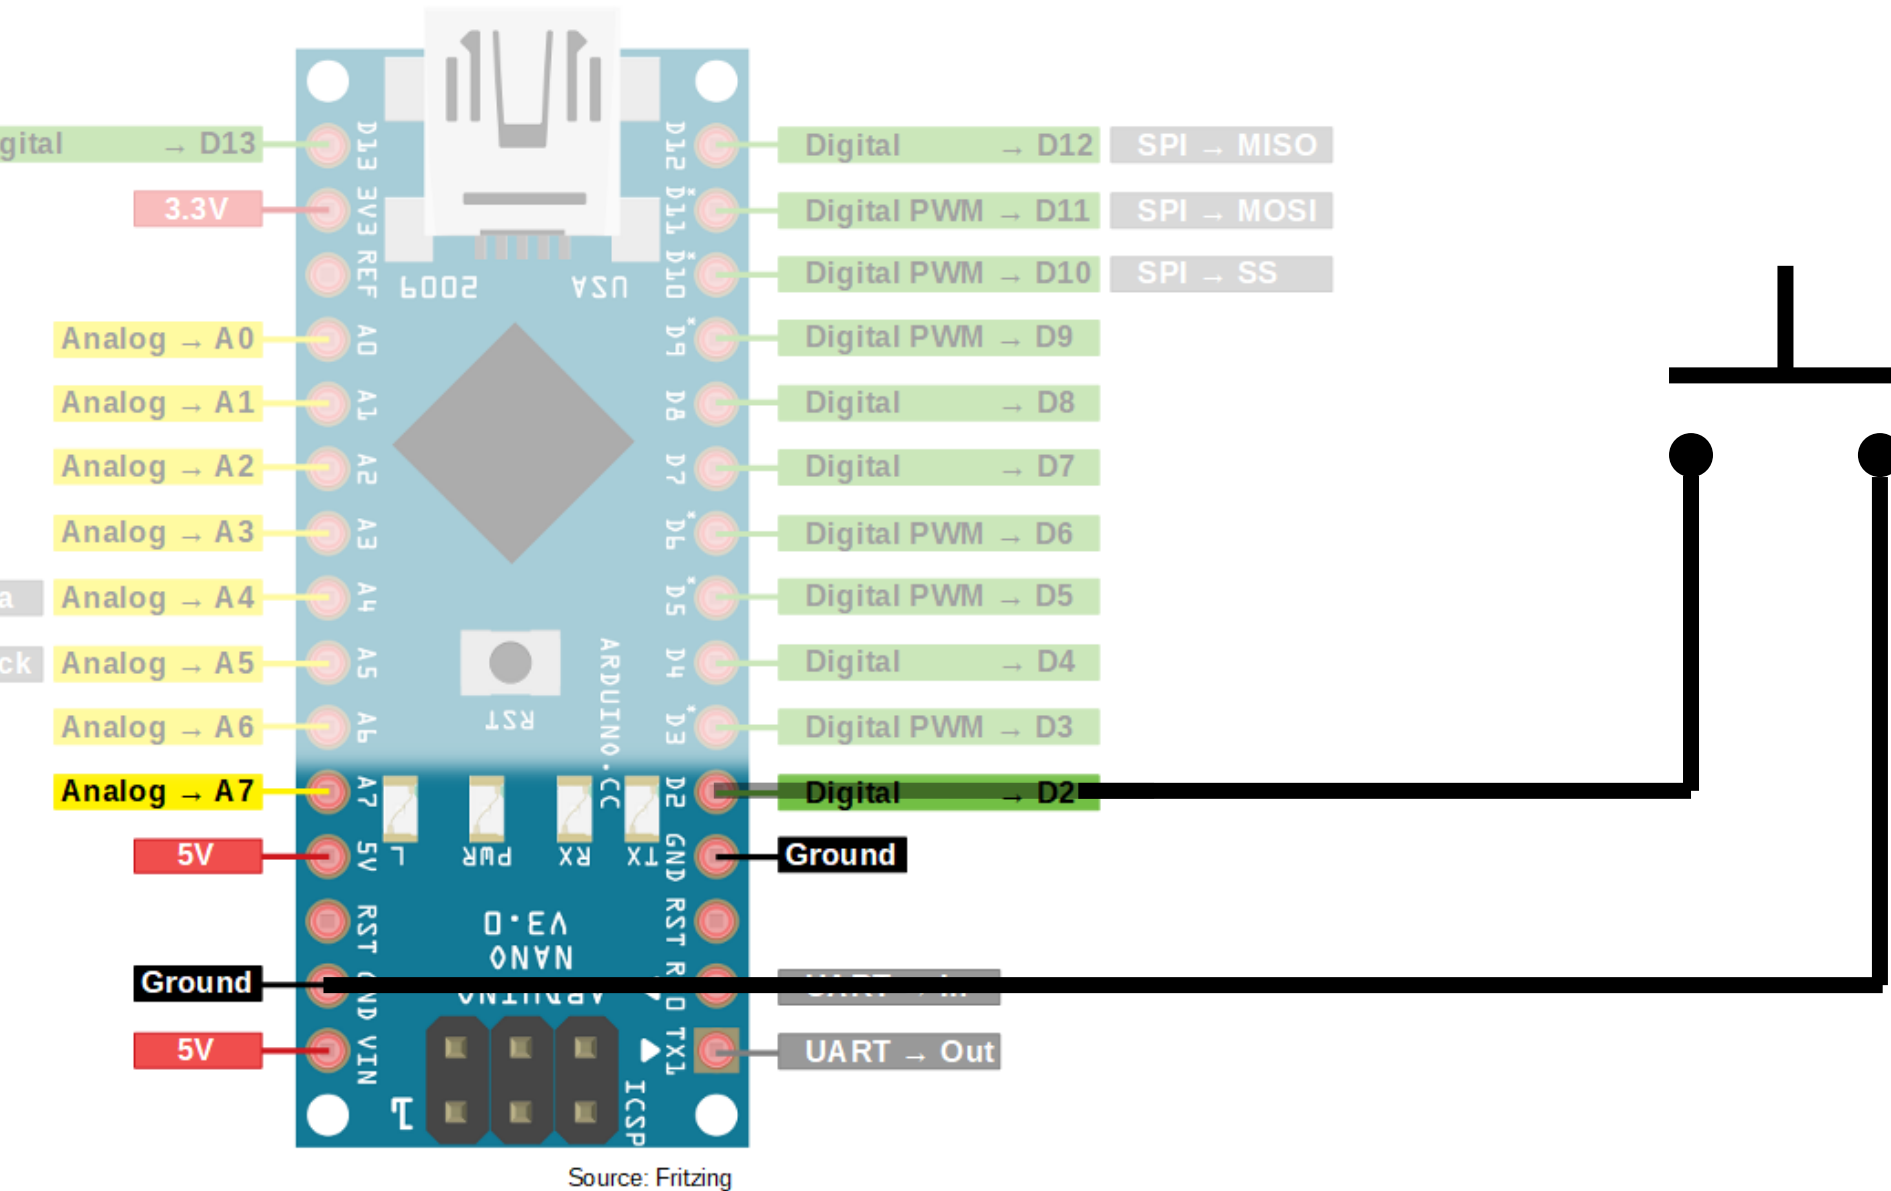

Pull up

Uloha 3: Softwarovy pull-up

Uloha 4: Detekovat stlacenie a rozopnutie

Experiment – prechodovy jav

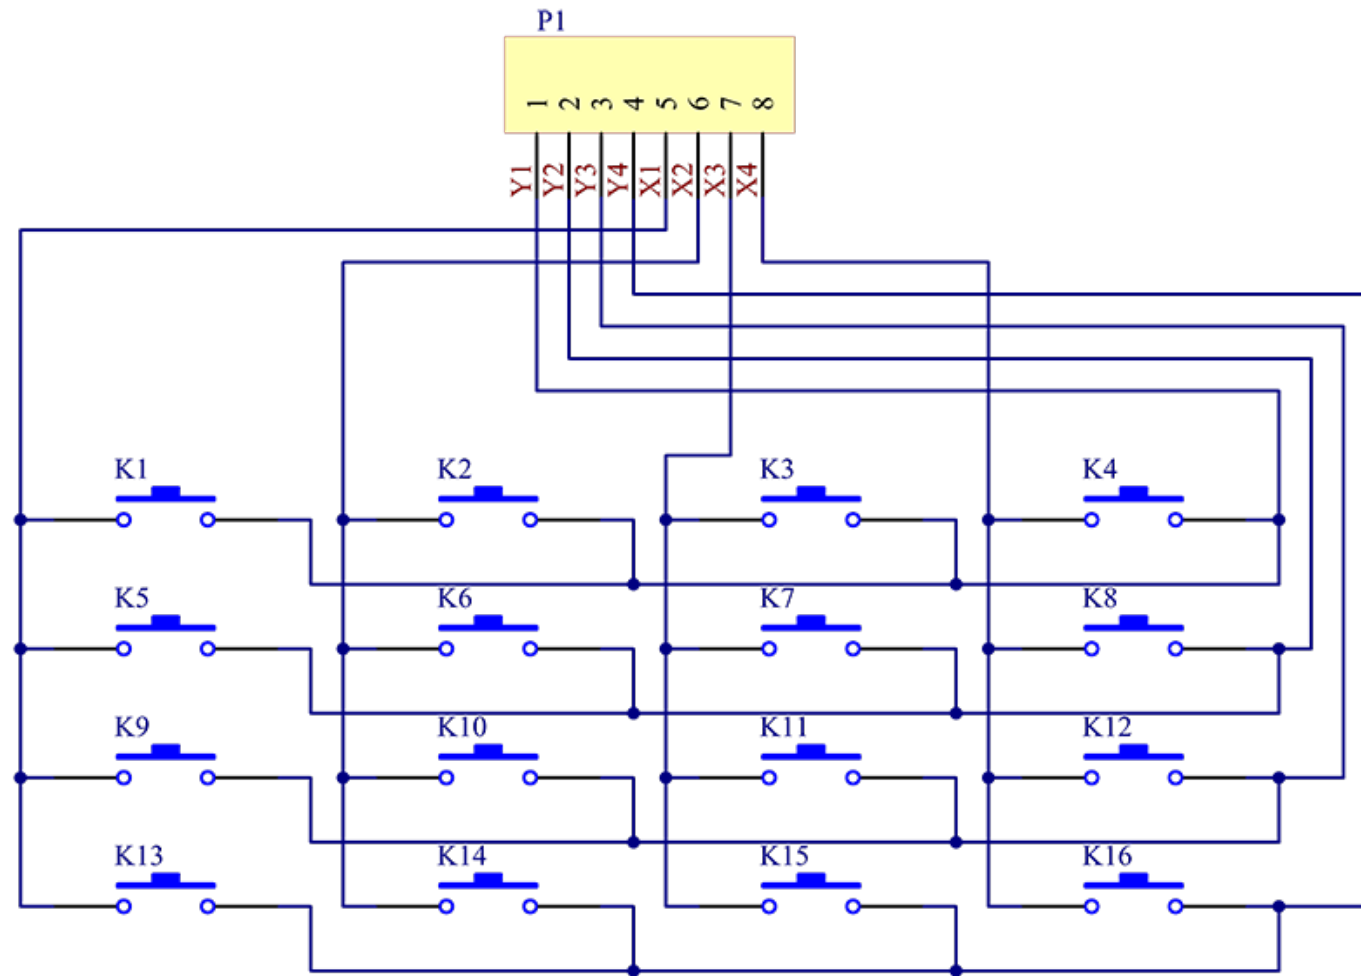

Uloha 5: Detekovat stlacenie a rozpnutie –
debouncing

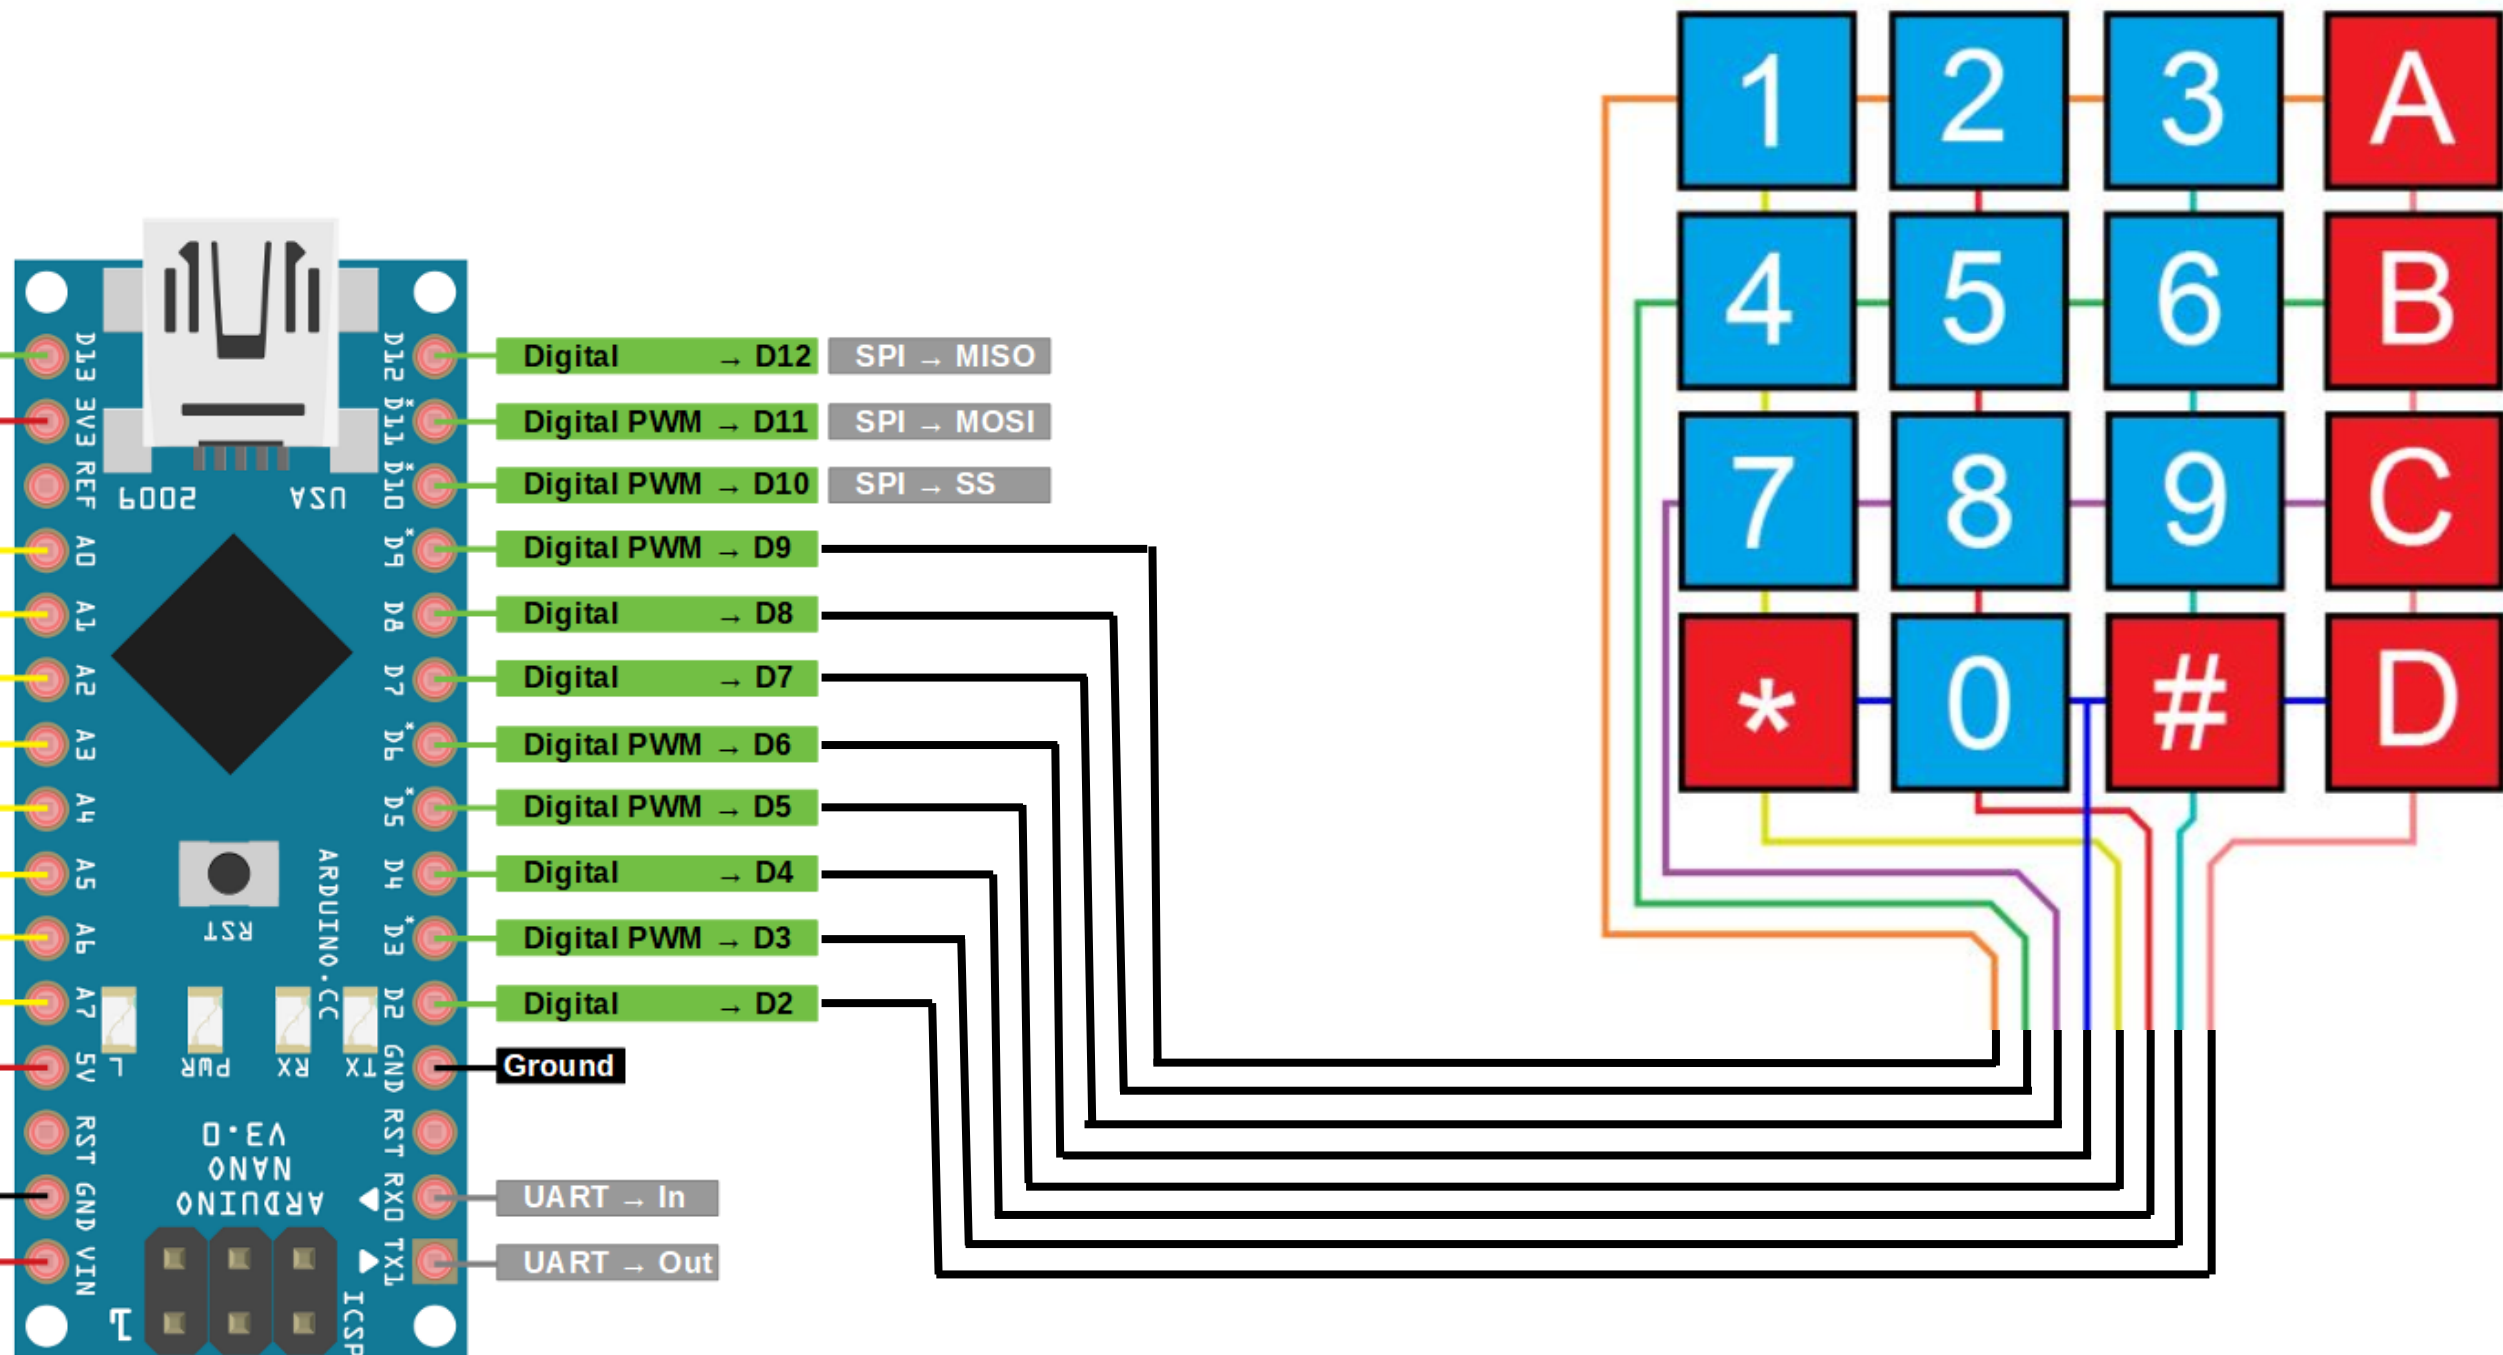

Uloha 6: Prepínat internu LED v okamihu stlacení
tlacidla

Maticova klavesnica

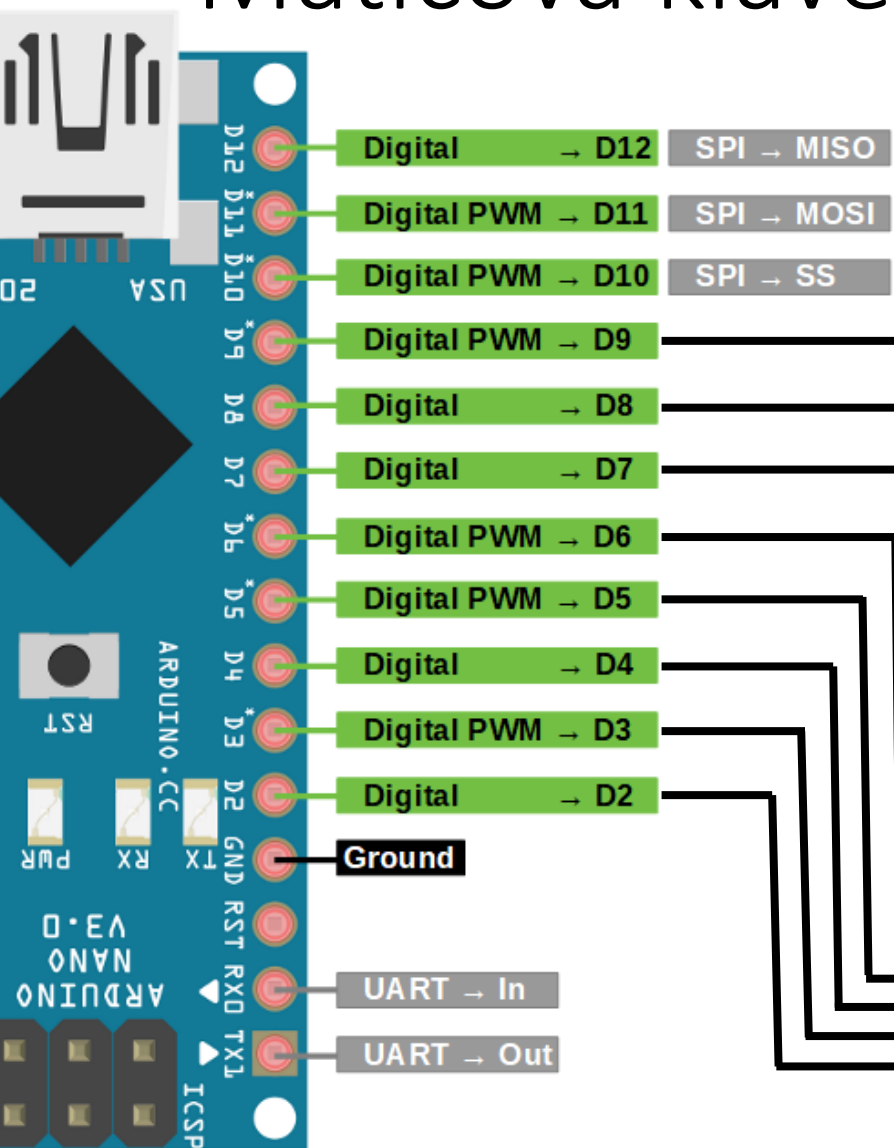

Maticova klavesnica – zapojenie

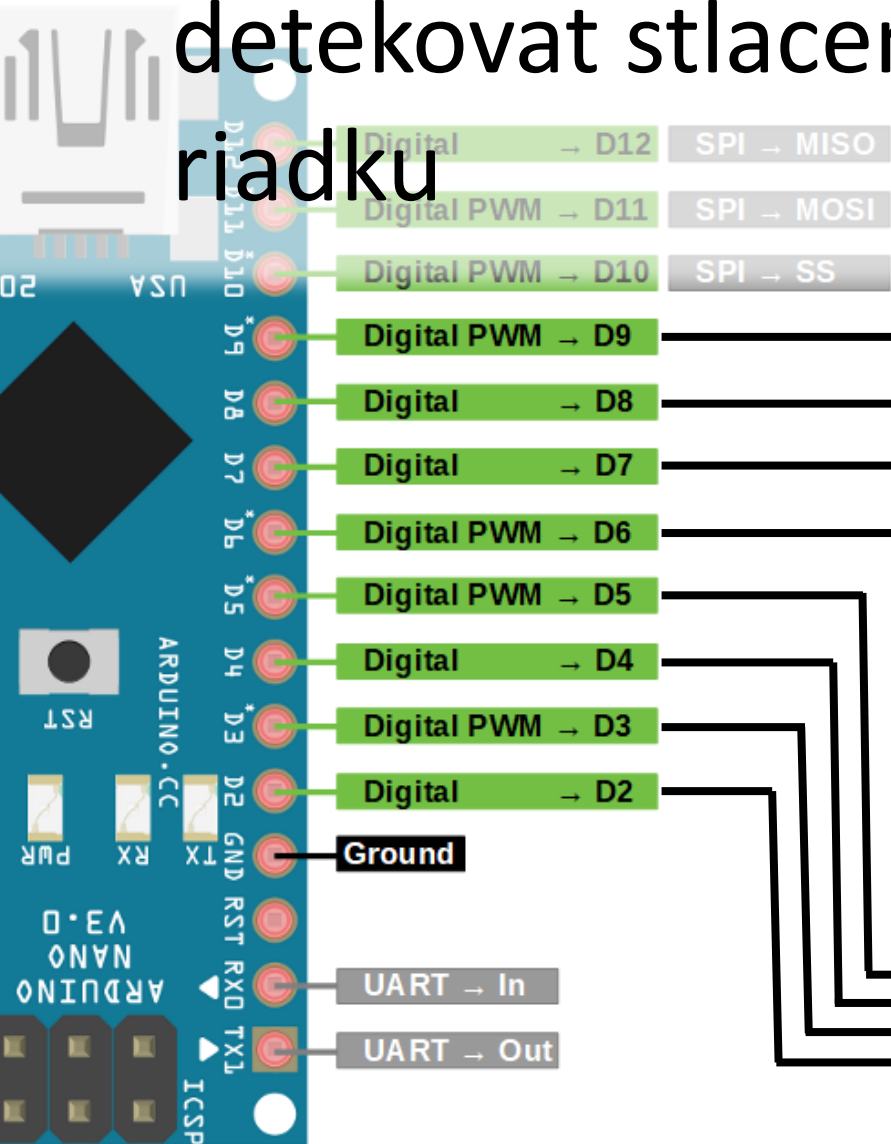

Maticova klavesnica

Uloha 7: Klavesnica – rozsvietit
internu led ked je stlacena
cislica “1” (piny 5 a 9)

Uloha 8: Klavesnica – detekovat stlacenie v prvom riadku

Uloha 9: Klavesnica – detekovat vsetky klavesy

Ukazka 10: Klavesnica – fantomove klavesy

Uloha 11: Klavesnica – dvojznakovy kodovy zamok

Uloha 12: Klavesnica – stvorznakovy kodovy zamok

Dakujem!
