Electro workshop 3

Ing. Gabriel Války, PhD.

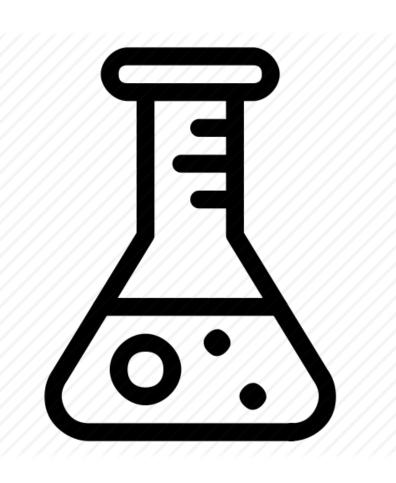

https://x.valky.eu/elec3

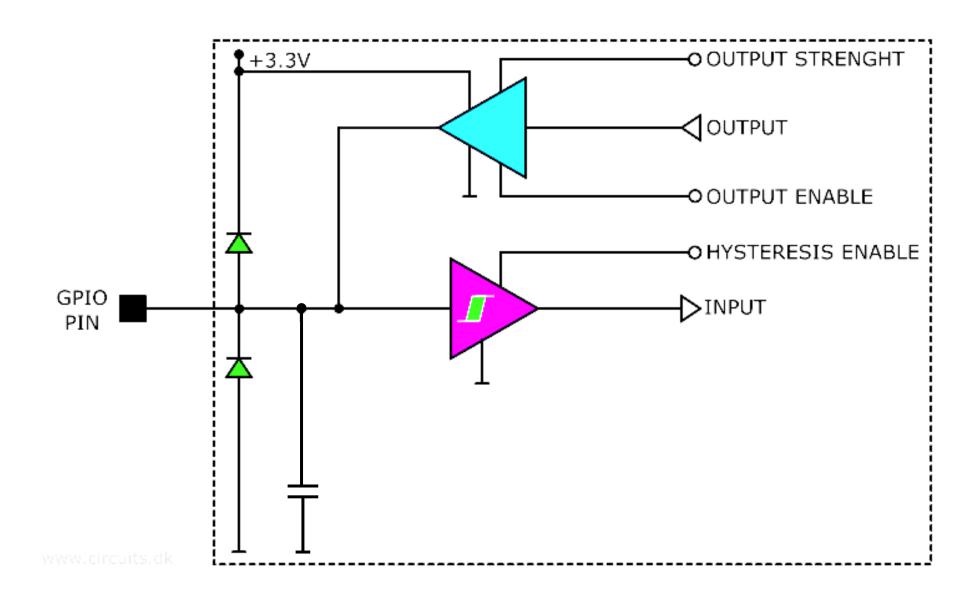

Experiment – vstupná impedancia

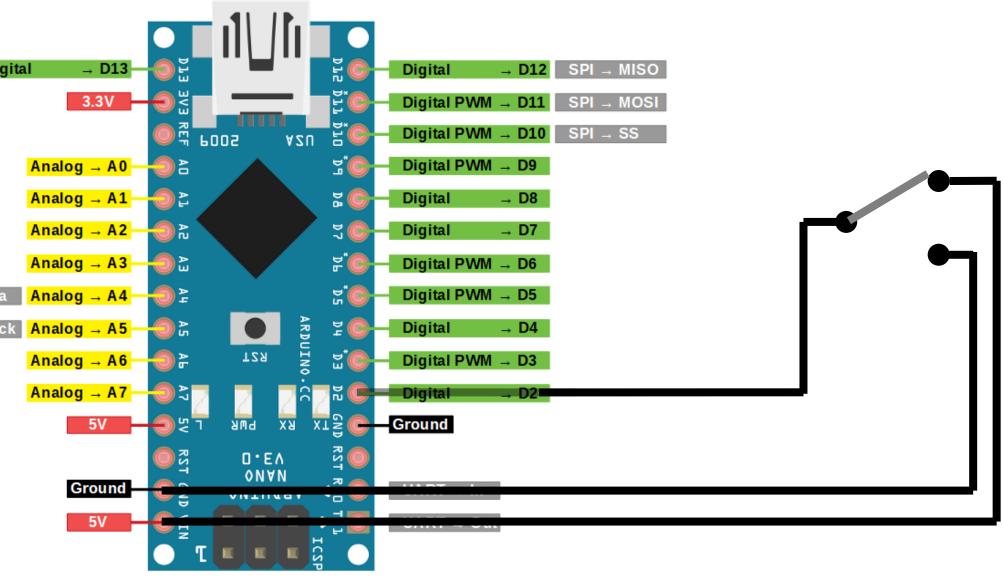

Letujeme

Úloha 0:

File -> Examples -> 01. Basics -> Blink

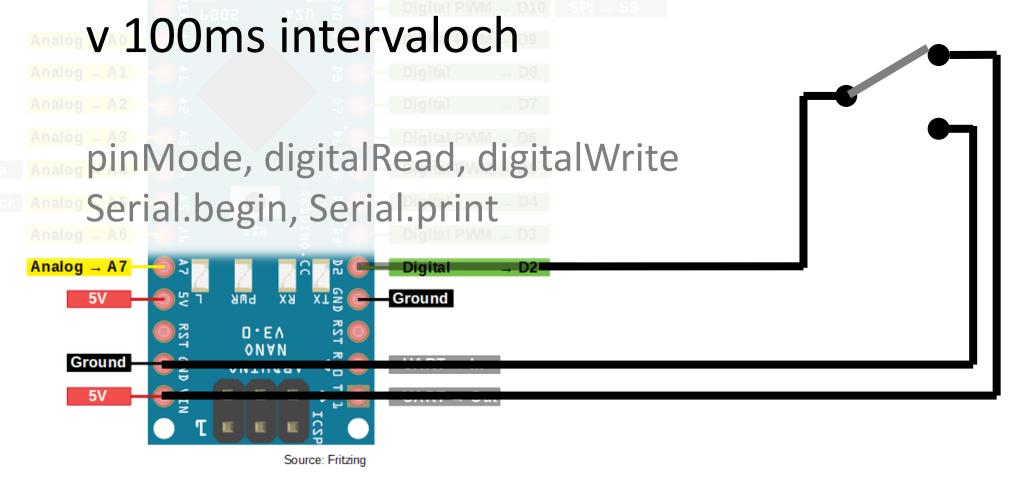

Tools -> Board -> Arduino Nano

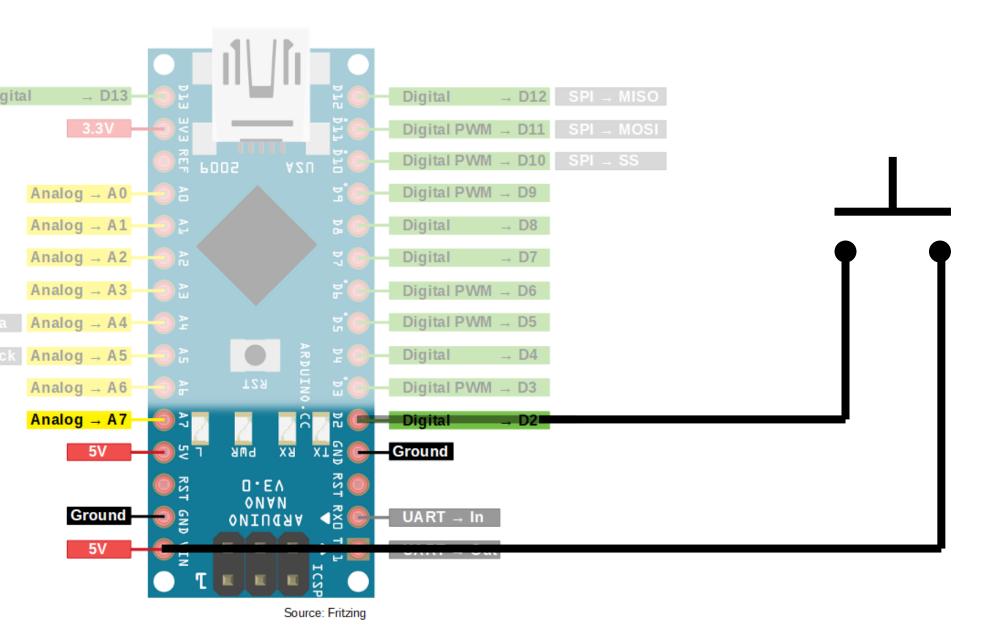

Tools -> Processor -> Atmega 328P (Old bootloader)

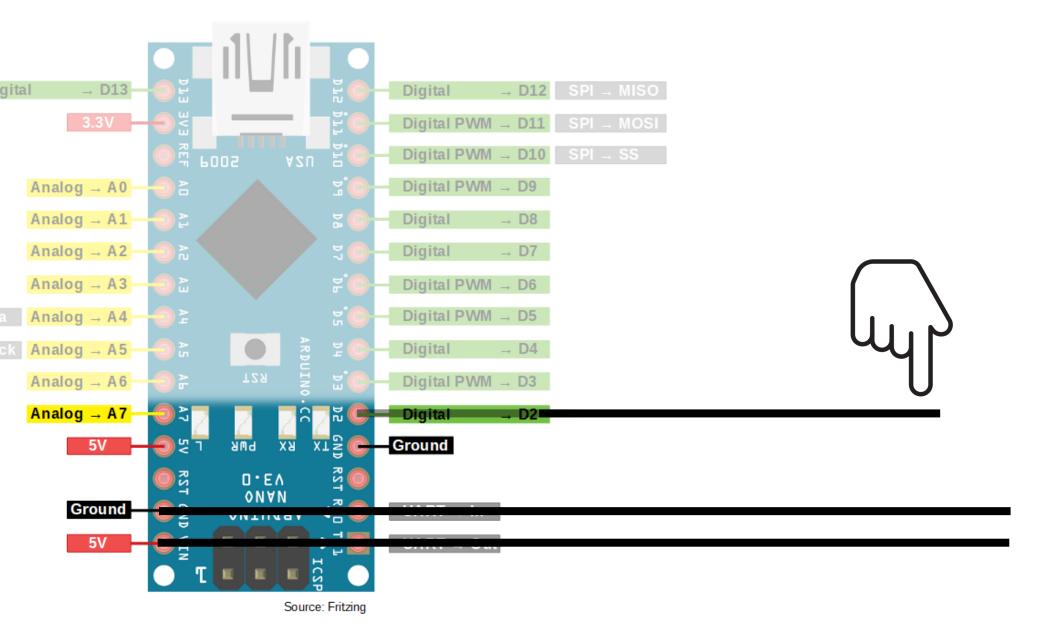

Úloha 1: Rozsvieť internú LED podľa logického stavu na vstupnom pine D2

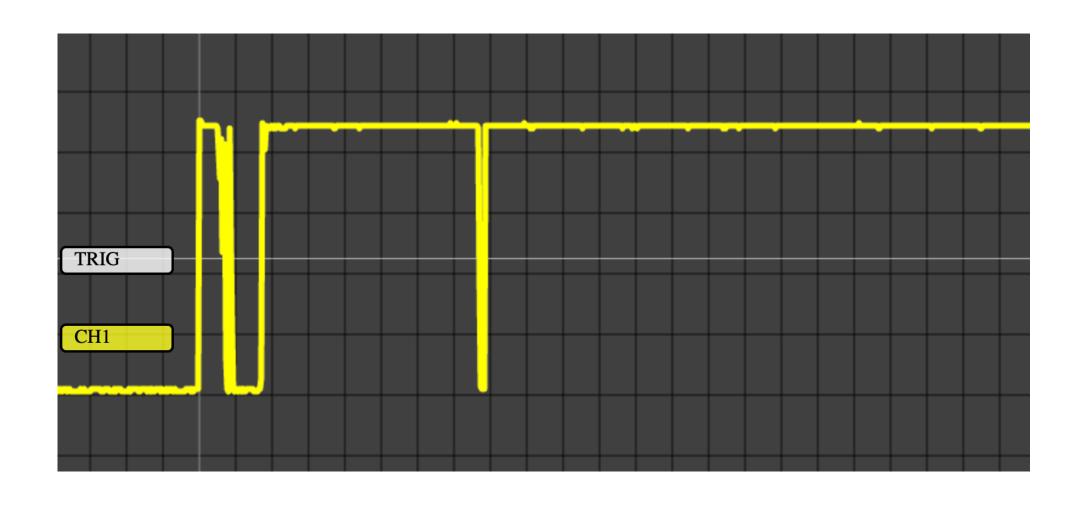

Úloha 2: Vypisuj hodnotu logického stavu pinu D2

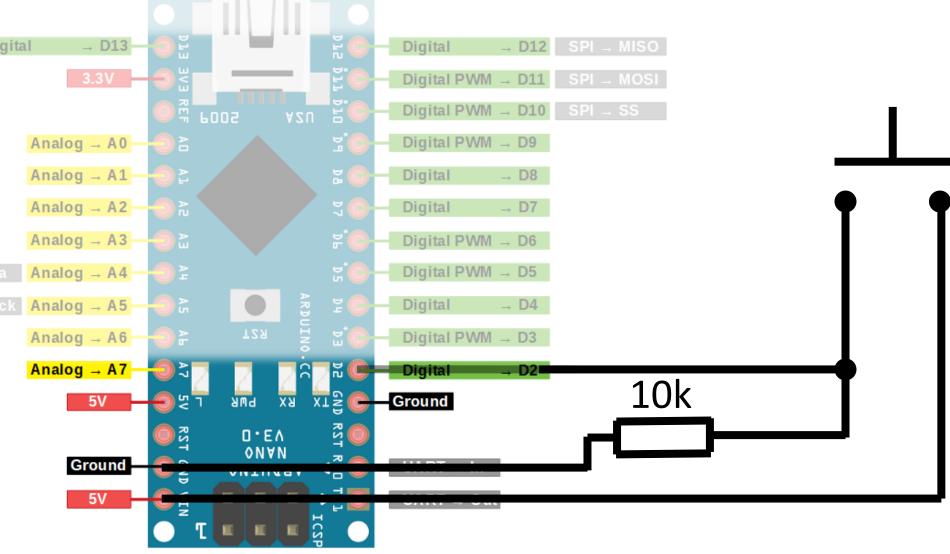

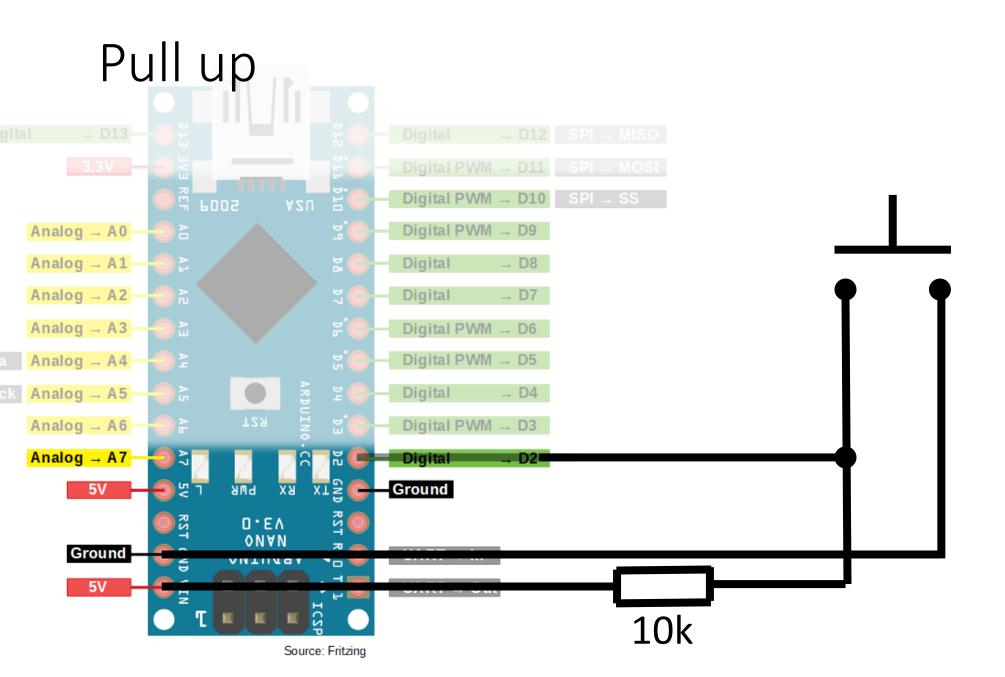

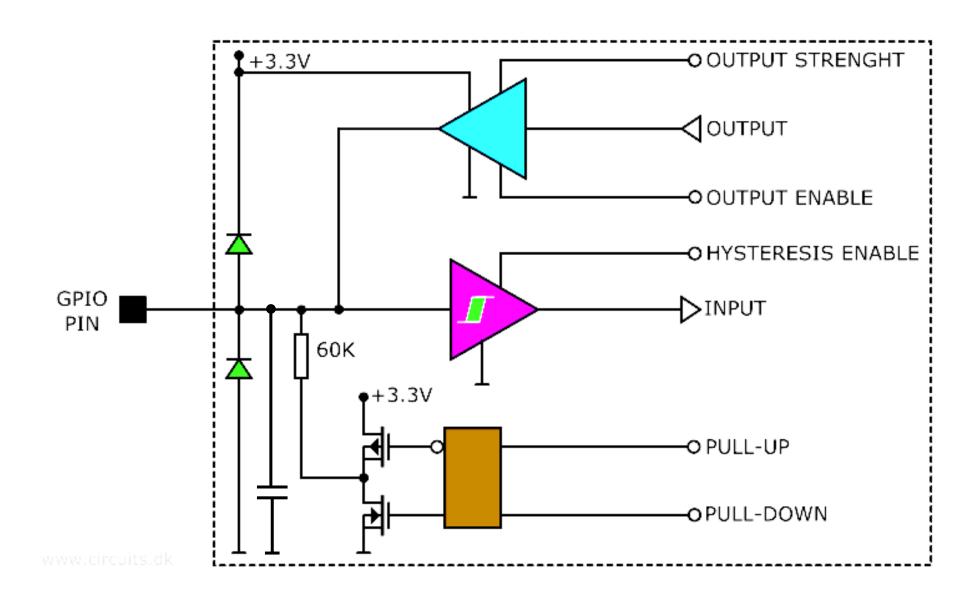

Experiment – sieťová kapacitná väzba

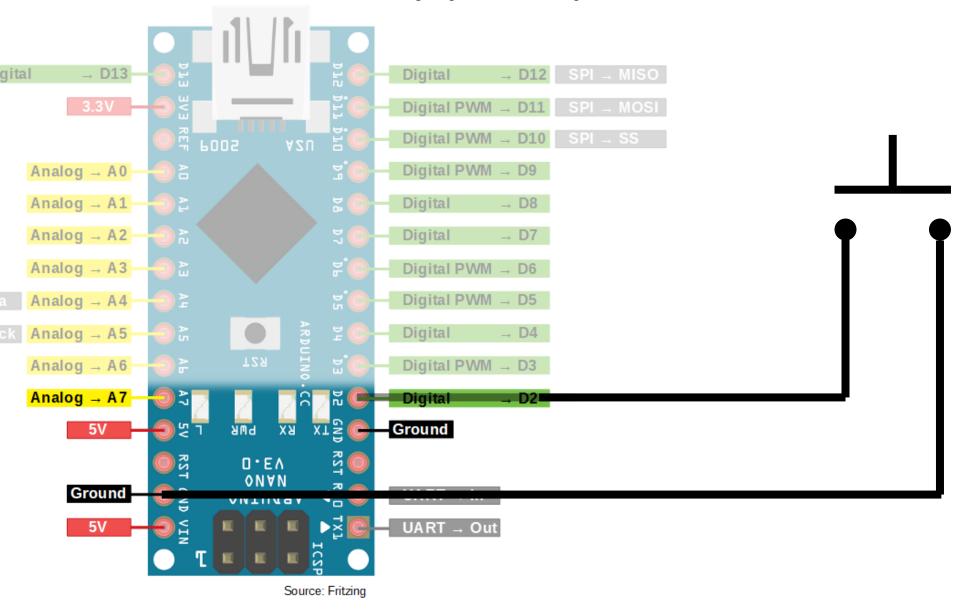

Pull down

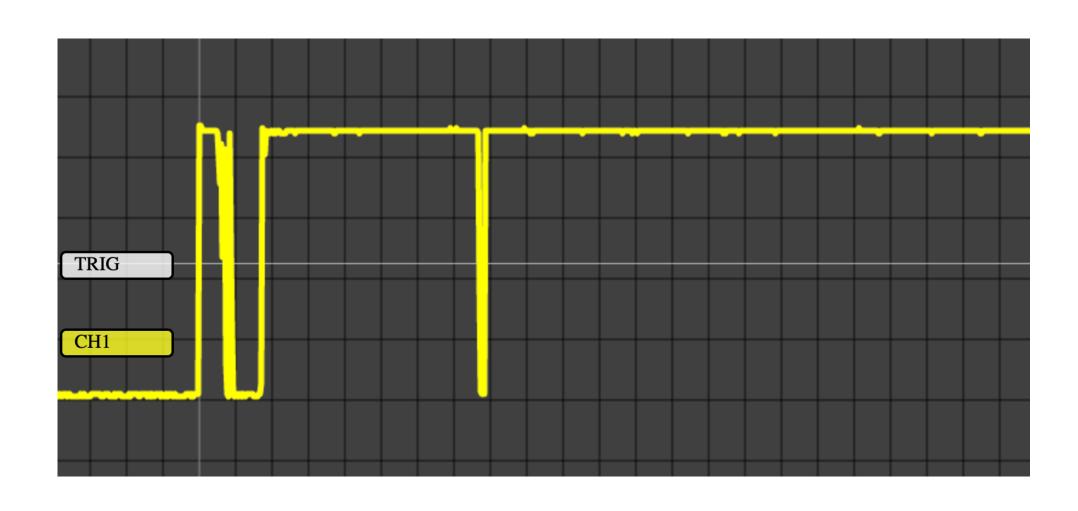

Úloha 3: Interný pull-up

Úloha 4: Detekovať stlačenie a rozopnutie spínača

Experiment – prechodový jav

Úloha 5: Detekovať stlačenie a rozopnutie – debouncing

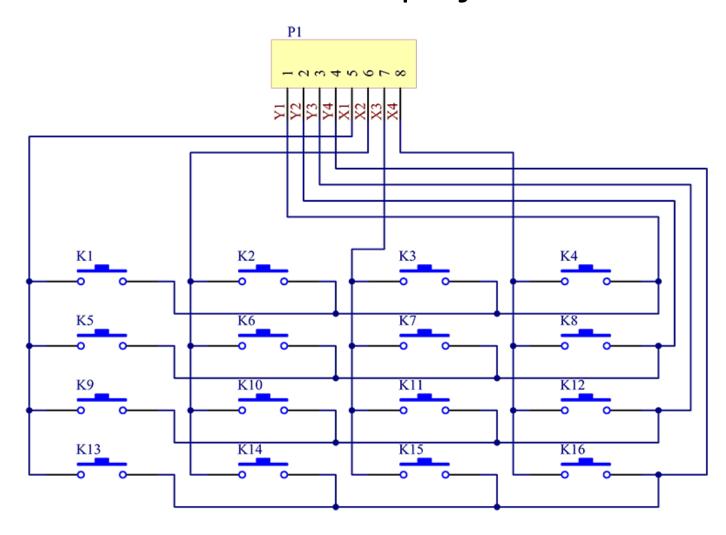

Úloha 6: Prepínať internú LED v okamihu stlačenia tlačidla

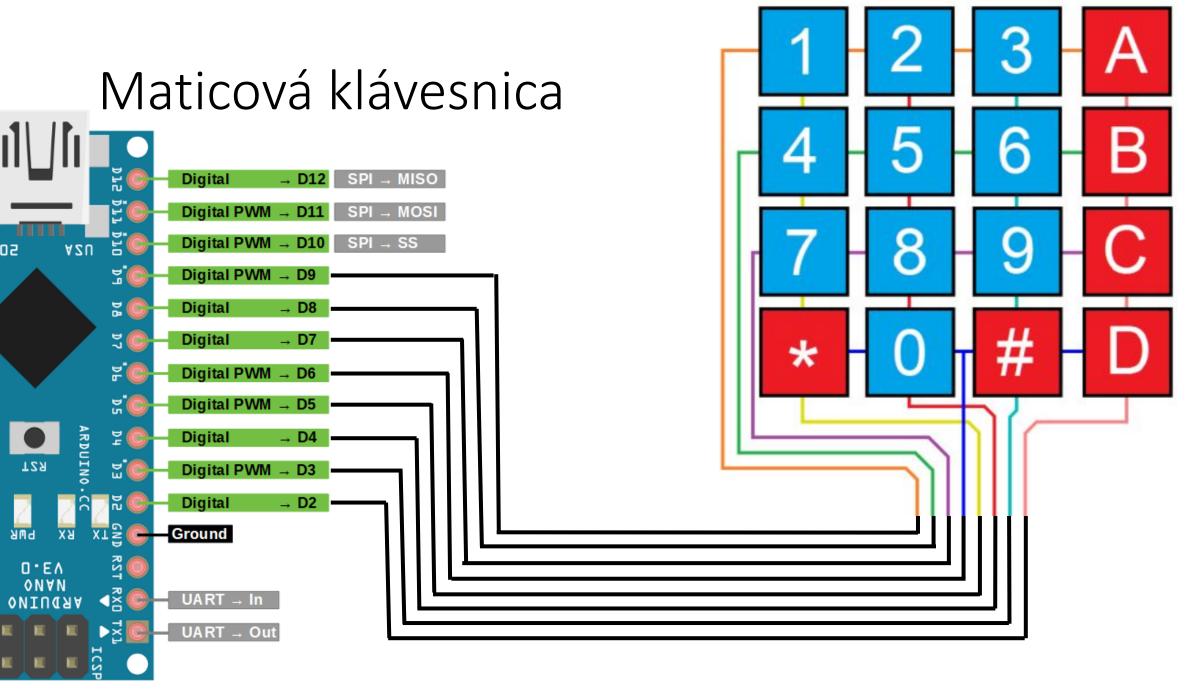

Maticová klávesnica

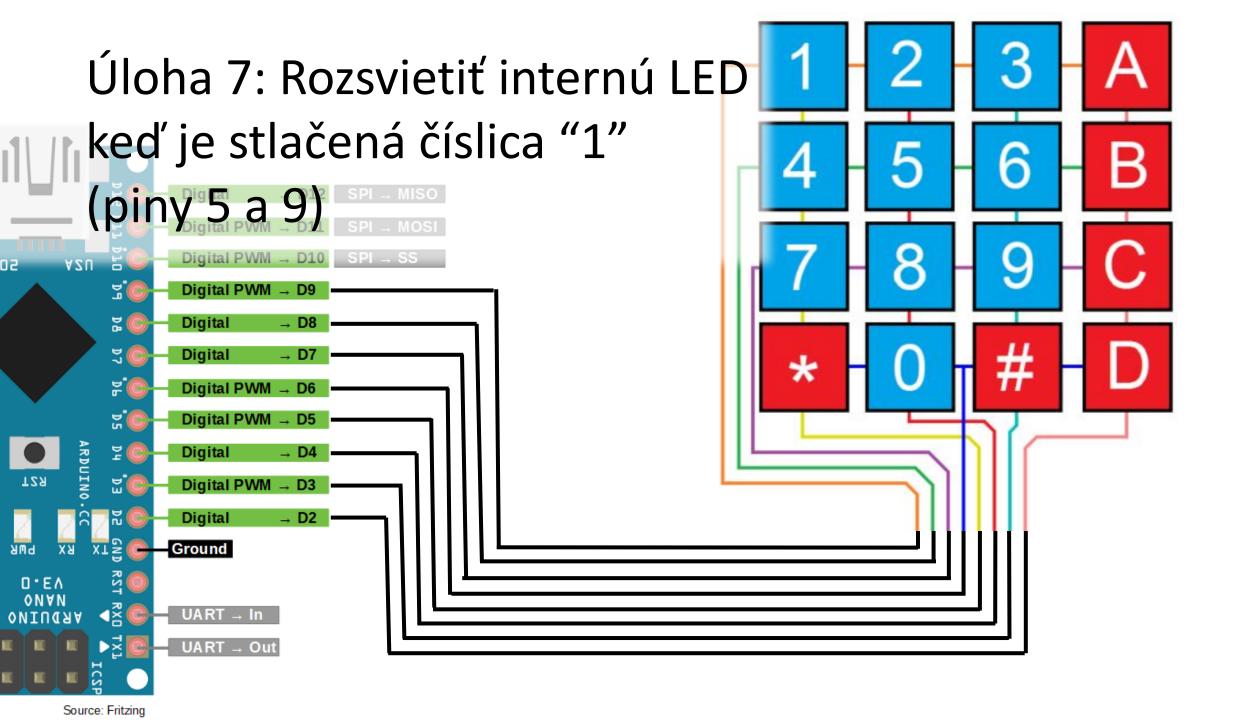

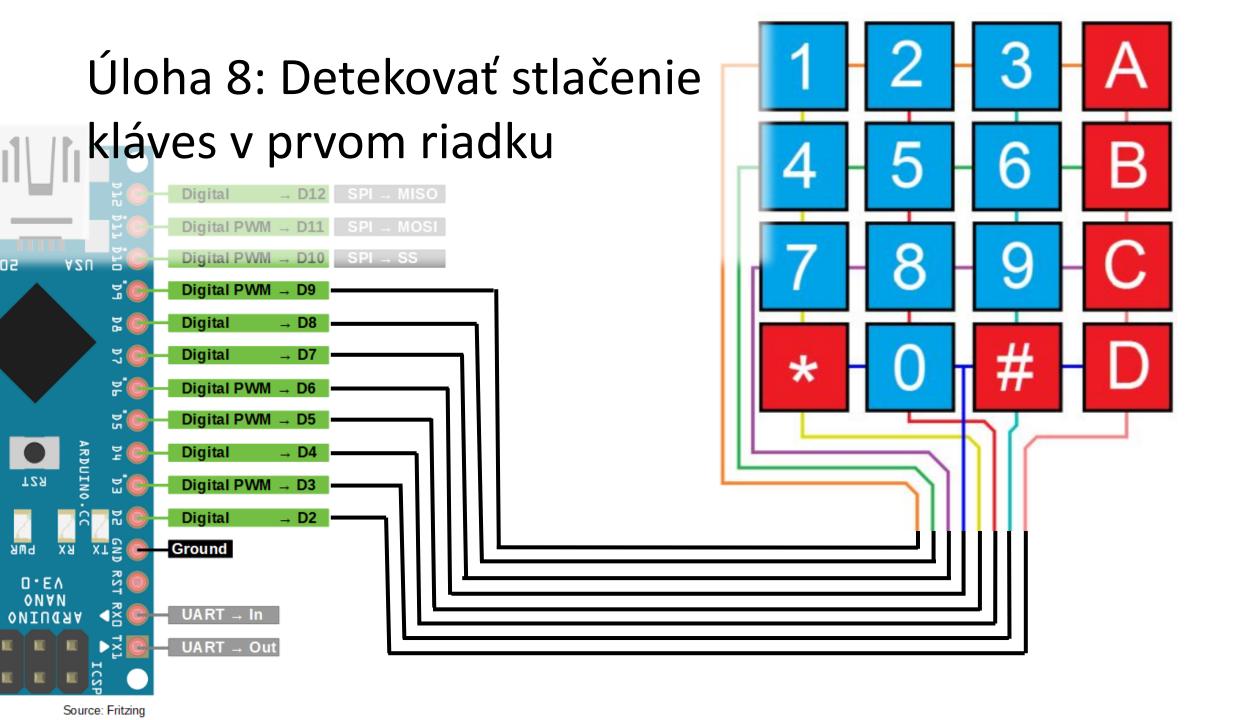

Maticová klávesnica – zapojenie

Úloha 9: Detekovať všetky klávesy

Ukážka 10: Fantómové klávesy

Úloha 11: Dvojznakový kódový zámok

Úloha 12: Štvorznakový kódový zámok

Ďakujem!

Ing. Gabriel Války, PhD.
